

Recoding Futures – Digital Skills Training

ComIT + Google announce *Recoding Futures*, a program that will provide digital skills training to thousands of Indigenous learners across Canada.

The one-month online introductory programs cover topics such as website programming, social media marketing or UX design, equipping the next generation of professionals with the skills needed to start their learning path.

In a second phase of the program, our students can be part of a 3-month online course to train interested people in technologies needed in the labor market. Students will be required to attend 8 hours/week online and to do considerable homework. Classes will teach basic logic notions and coding languages such as Java, .Net and React among others. The topics of the courses offered will be determined by job openings across Canada. Soft skills and help with networking will also be included in our programs.

WHAT WE OFFER

COURSE 1

1-month online introductory programs that cover topics such as web programming, social media marketing or UX design.

COURSE 2

3-month online program on advanced programming languages (Java, .NET, ReactJS, NodeJS and more).

This program is available to any Indigenous individual over the age of 15 and it is **completely FREE of charge**. We are currently running three different one-month programs focused on website programming, social media marketing and User Experience design.

The courses run for 9 classes, 2 evenings per week and each class is 3 hours long. It is 100% online but instructor led, so the students will have to have access to a device with internet access. Classes will be recorded in case there are connectivity problems.

Below you can find the link for people who want to register or to share it with others who might be interested.
