ATTENTION

Hunters, gatherers, harvesters: What you need to know about bird flu in BC

Avian influenza (bird flu) is spreading among wild birds, poultry and other animals in BC. Sometimes it can spread to humans and make people sick. It's important to follow safety measures while hunting, gathering, and harvesting.

Here's what you can do to prevent the spread of bird flu:

When hunting or gathering

When cleaning game

When cooking game

Avoid sick wildlife

Don't touch birds or animals that appear sick or have died from unknown causes.

Report dead birds

Call BC's Wild Bird Reporting Line at **1-866-431-2473.**

Protect yourself

Work outdoors or in a space with good airflow.

Wear gloves and a mask.

Clean and disinfect well

Wash hands, tools, clothes, shoes and surfaces thoroughly.

Use hot soapy water and disinfectant (e.g., 25mL bleach in 2L water).

Separate game

from other foods to avoid crosscontamination (e.g. use different cutting board)

Cook game well

Cook meat to an internal temperature of 74°C (165°F) or higher.

Whole birds should reach 82°C (180°F).

Avoid eating raw or undercooked eggs.

Hunting and gathering are vital to our culture and way of life. It is our responsibility to protect wildlife, the environment and our communities.

Hunters, gatherers, harvesters: What you need to know about bird flu in BC

What is avian influenza (bird flu)?

Avian influenza is a virus that spreads quickly among birds. Since 2022, cases have increased globally, affecting wild birds, poultry, and some mammals like skunks and foxes.

Humans can also get sick from handling infected birds or animals because the virus can survive on feathers and surfaces for weeks.

How long the virus can survive at different temperatures:

Signs of a sick bird

Do not touch sick or dead birds.

- Weakness or lack of movement
- Sudden death

- Swelling around the head, neck, or eyes
- Diarrhea

- Coughing
- Sneezing
- Difficulty breathing
